CORRECT AND INCORRECT WAYS TO STORE OR OPERATE POWERED INDUSTRIAL TRUCKS

1A. The set up of this lift operation is incorrect. Tools and debris may fall and injure pedestrians, because the area is not roped off properly.

1B. This is the correct way to work while on a lift. The area is roped off to avoid foot traffic under the lift.

2A. The lift in this photo is incorrect. It is parked near a public access way, is not roped off, and the basket is in the air.

2B. This is the correct way to position an unmanned lift.

These aerial lifts shown in photos 1A and 2A, are either stored or in operation in violation of manufactures recommended guidelines.

RECOMMENDED STORAGE GUIDELINES FOR AERIAL LIFTS

1. The recommended guidelines from the manufacturer states; the "lift boom should be lowered to the ground in a Stowed Position," when not in use.

2. Park your machine in a designated area or out of traffic and only on level ground.

The University either owns or rents lifts manufactured by Genie and ABM. Follow all directions and guidelines listed in the operations manual.
